

It is not an overstatement to say that Regina Stilp has quietly been one of the most impactful people in Chicago real estate development in the past decade. She has been the guiding hand in the design and execution of some of the most creative redevelopments in Chicago history, including (but not limited to) the transformation of a 55-year-old printer's building at 400 S Jefferson into the Sara Lee (now Tyson) headquarters, the remaking of a 100 year-old obsolete cold storage building into Google's Midwest headquarters, and the complete repositioning of the 870,000 sq. ft., Burnham designed building at 111 N. Canal into a tech hub housing companies including Gogo, Uber, Twitter, Level 3, and many more. For her vision, creativity, ability to honor the history and character of architecture while at the same time, making it relevant, and for recognizing the cadence of a community and working within those parameters to develop assets which not only fit, but are additive.

Regina is a Founding Principal at Farpoint Development. Previously she spent twenty years as a Principal and Director of Design at Sterling Bay. She has led the design and strategic transformation of obsolete buildings into highly desirable properties. She personally feels that she can help to honor Chicago's architectural past by preserving and evolving these buildings for future generations. Her current efforts include the renovation of the historic Uptown Theatre, re-imaging industrial buildings along the Elston Corridor, and the visioning the Burnham Lakefront development project.

Regina received her Bachelor of Arts at the University of Iowa and lives in Wilmette with her husband and three kids. She remains active with political volunteering and championing women's rights.
